

# News Release

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, FRIDAY, July 19, 2019

BEA 19-33

Technical: Thomas Howells (301) 278-9586 [IndustryEconomicAccounts@bea.gov](mailto:IndustryEconomicAccounts@bea.gov)  
Edward Morgan (301) 278-9541  
Media: Jeannine Aversa (301) 278-9003 [Jeannine.Aversa@bea.gov](mailto:Jeannine.Aversa@bea.gov)

## Gross Domestic Product by Industry: First Quarter 2019

Finance and insurance; retail trade; and health care and social assistance were the leading contributors to the increase in U.S. economic growth in the first quarter of 2019. According to gross domestic product (GDP) by industry statistics released by the Bureau of Economic Analysis, 16 of 22 industry groups contributed to the overall 3.1 percent increase in real GDP in the first quarter.

- For the finance and insurance industry group, real value added—a measure of an industry’s contribution to GDP—increased 9.5 percent in the first quarter, after decreasing 6.2 percent in the fourth quarter. The first quarter growth primarily reflected an increase in insurance carriers and related activities.
- Retail trade increased 11.9 percent in the first quarter, after decreasing 2.5 percent in the fourth. This primarily reflected an increase in other retail, which includes gasoline stations and pharmacies and drug stores.
- Health care and social assistance increased 6.2 percent, after increasing 2.4 percent. This was the largest increase since the fourth quarter of 2008.

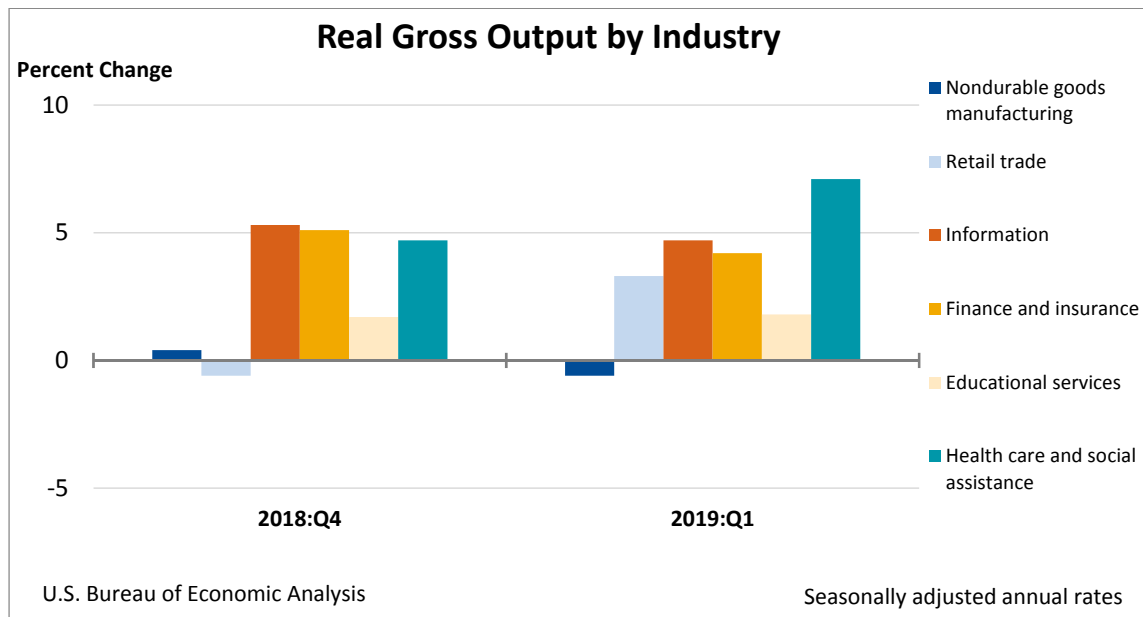

#### Other highlights

- Nondurable goods manufacturing increased 8.4 percent in the first quarter, after increasing 1.1 percent in the fourth quarter. The first quarter growth primarily reflected increases in petroleum and coal products.
- Information services increased 4.5 percent, after increasing 8.9 percent. The first quarter growth primarily reflected increases in data processing, internet publishing, and other information services, as well as publishing industries.
- Education services increased 4.3 percent, after decreasing 1.9 percent.

#### Gross output by industry

Economy-wide, real gross output—principally a measure of an industry’s sales or receipts, which includes sales to final users in the economy (GDP) and sales to other industries (intermediate inputs)—increased 1.6 percent in the first quarter. This reflected an increase of 2.8 percent for the private goods-producing sector, 1.3 percent for the private services-producing sector, and 0.3 percent for the government sector. Overall, 14 of 22 industry groups contributed to the increase in real gross output.

- Real gross output for information services increased 4.7 percent in the first quarter, after increasing 5.3 percent in the fourth quarter. The increase was primarily attributed to the publishing industry, which includes software.
- Finance and insurance increased 4.2 percent, after increasing 5.1 percent.
- Health care and social assistance increased 7.1 percent, after increasing 4.7 percent. The first quarter growth reflected increases in hospitals and ambulatory health care services.

### Definitions

**Gross domestic product** (GDP) or **value added** is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

**Gross output** (GO) is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

**Current-dollar estimates** are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal estimates” or as “current-price estimates.”

**Real values** are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

### Statistical conventions

**Annual rates.** Quarterly values are expressed at seasonally-adjusted annual rates (SAAR), unless otherwise specified. Dollar changes are calculated as the difference between these SAAR values. For detail, see the FAQ [“Why does BEA publish estimates at annual rates?”](#)

**Quantities and prices.** Quantities, or “real” measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). “Real” dollar series are calculated by multiplying the published quantity index by the current-dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from chained-dollar levels and quantity indexes are conceptually the same; any differences are due to rounding.

**Chained-dollar values** are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, the value of the “Not allocated by industry” line reflects the difference between the first line and the sum of the most detailed lines. For the real value added by industry table, this value also reflects differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because the industry details are calculated using source data and methodologies that differ from those used to calculate growth in the top-line, expenditure-based measure of real GDP.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

Note. Percentage-point contributions do not sum to the percent change in the chain-type price index for gross domestic product because the industry details are calculated using source data and methodologies that differ from those used to calculate growth in the top-line, expenditure-based measure of GDP price growth.
