Outdoor Recreation Satellite Account, U.S. and States, 2019

New statistics for 2018 and 2019; prior years updated

The Bureau of Economic Analysis released statistics today measuring the outdoor recreation economy for the nation, all 50 states, and the District of Columbia. The new U.S. data show that the outdoor recreation economy accounted for 2.1 percent (\$459.8 billion) of current-dollar gross domestic product (GDP) for the nation in 2019 (national table 11). At the state level, outdoor recreation value added as a share of state GDP ranged from 5.8 percent in Hawaii to 1.3 percent in Connecticut. The share was 1.1 percent in the District of Columbia.

Inflation-adjusted (real) GDP for the outdoor recreation economy grew by 1.3 percent in 2019, compared with 2.2 percent growth of the overall U.S. economy. Real gross output for the outdoor recreation economy increased by 1.4 percent, while outdoor recreation compensation increased 3.9 percent and employment increased 0.4 percent.

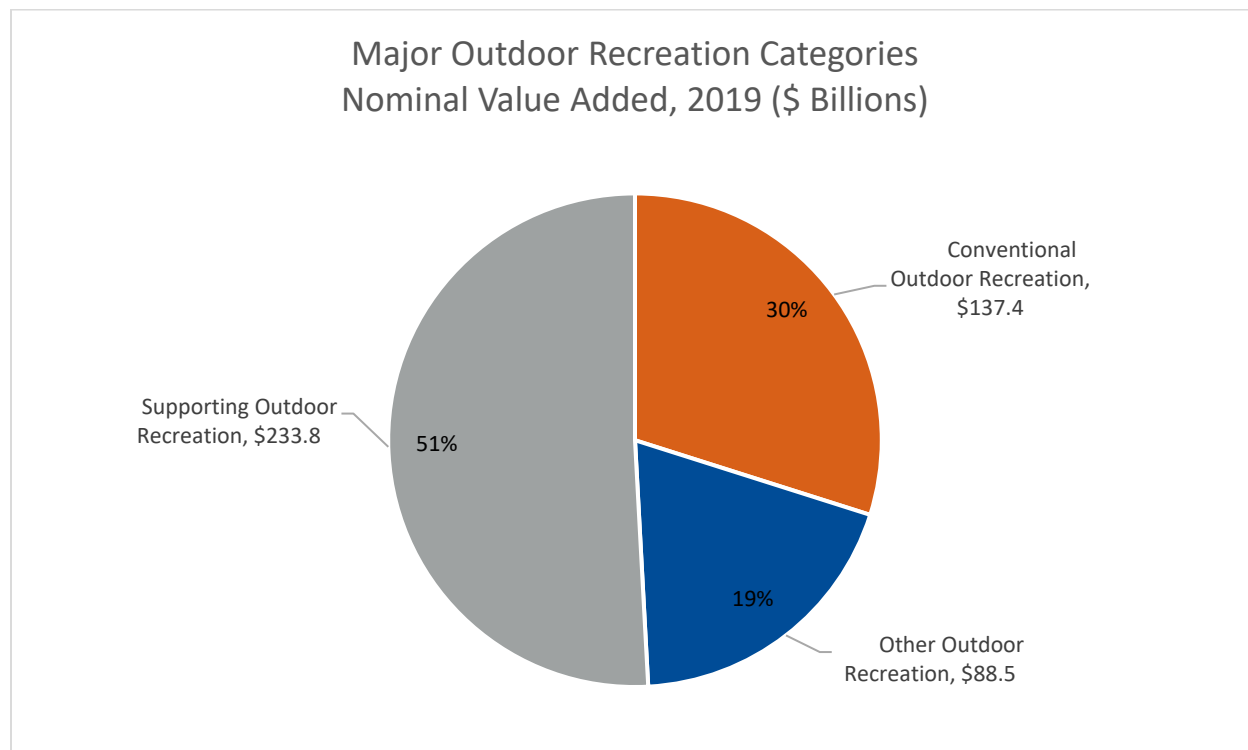

U.S. Bureau of Economic Analysis

Outdoor Recreation by Activity

Outdoor recreation activities fall into three general categories: conventional activities (including activities such as bicycling, boating, hiking, and hunting); other core activities (such as gardening and outdoor concerts); and supporting activities (such as construction, travel and tourism, local trips, and government expenditures).

In 2019, conventional outdoor recreation accounted for 30.0 percent of U.S. outdoor recreation value added, other outdoor recreation accounted for 19.0 percent, and supporting activities accounted for the remaining 51.0 percent.

U.S. Bureau of Economic Analysis

Other value added by activity highlights for 2019 include:

- **Boating/fishing** was the largest conventional activity for the nation as a whole at \$23.6 billion in current-dollar value added. This was the largest conventional activity in 30 states and the District of Columbia and the second largest activity in 11 states. Florida (\$3.3 billion), California (\$2.0 billion), and Texas (\$1.7 billion) were the largest contributors to U.S. value added.
- **RVing** was the second largest conventional activity nationally at \$18.6 billion in current-dollar value added. This was the largest conventional activity in 10 states and the second largest in 22 states and the District of Columbia. The largest contributors were Indiana (\$3.4 billion) and Ohio (\$646.3 million).
- **Snow activities** was the largest conventional activity in Colorado (\$1.7 billion), Utah (\$666.3 million), Vermont (\$286.9 million), and Wyoming (\$147.5 million) in current-dollar value added. At the national level, snow activities was the sixth largest conventional activity at \$6.3 billion.

U.S. Bureau of Economic Analysis

Outdoor Recreation by Industry

The outdoor recreation by industry data show the contribution of different industries to the outdoor recreation economy, including their impact on value added, gross output, employment, and compensation.

For the nation, the **arts, entertainment, recreation, accommodation, and food services** sector was the largest contributor to U.S. outdoor recreation value added in 2019, accounting for \$128.5 billion (national table 10).

At the state level, this same sector was the largest contributor to outdoor recreation value added in 31 states and the District of Columbia. The leading contributors were Florida (\$19.9 billion), California (\$16.6 billion), and New York (\$9.1 billion) (state table 3).

Other value added by industry highlights for 2019 include:

- Retail trade** made the second largest sector contribution to outdoor recreation nationally, accounting for \$98.6 billion in current-dollar value added. At the state level, retail trade was the largest contributor to outdoor recreation in 13 states and the second largest contributor in 32 states.

- **Manufacturing**, the third largest sector, contributed \$55.0 billion nationally to the outdoor recreation economy. At the state level, this sector was the largest contributor to the outdoor recreation economy in Texas and Indiana.

Outdoor Recreation Satellite Account (ORSA) National and State Revision Details 2012-2017

Today, BEA also released updated outdoor recreation statistics at the national level on gross output, value added, employment, and compensation from 2014 to 2017. Revisions to these statistics primarily reflect the incorporation of the 2019 annual update of the Industry Economic Accounts released on September 30, 2020. Incorporation of results from the annual update allows the statistics to more accurately capture the dynamics of the outdoor recreation economy.

The state ORSA statistics were updated for 2012-2017. The revised statistics reflect the updated national data for 2014-2017 as well as newly available and revised regional source data.

Definitions

Gross domestic product (GDP) or value added is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

Gross output (GO) is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at “market value.” Also referred to as “nominal estimates” or as “current-price estimates.”

Chained-dollar estimates are calculated by taking the current-dollar level of a series in the base period and multiplying it by the change in the chained-type quantity index number for the series since the base period. Chained-dollar estimates correctly show growth rates for a series but are not additive in periods other than the base period.

ORSA employment consists of all full-time, part-time, and temporary wage-and-salary jobs where the workers are engaged in the production of outdoor recreation goods and services. Self-employed individuals are excluded from employment totals.

ORSA compensation consists of the pay to employees (including wages and salaries, and benefits such as employer contributions to pension and health funds) in return for their outdoor recreation-related work during a given year. Pay to the self-employed is excluded from compensation but included in value added.

ORSA value added (also referred to as GDP) consists of the value of outdoor recreation goods and services produced less the value of expenses incurred for their production. The activity of self-employed individuals is included in value added.

Geography of outdoor recreation

Outdoor recreation is measured by place of production, not residence of consumer. The value of manufactured goods, such as boats, is assigned to the state where they are produced, even if the goods are not ultimately used there. Services, such as sailing lessons, are assigned to the location where they are consumed. The value of services provided by retailers, such as boat dealers, is also assigned to the location of sale. The services of retailers (known as trade margins) are not measured by sales but are most akin to sales less the cost of goods sold. The production of imported goods is excluded from ORSA, but the value of the services of retailers selling the imported goods is included.

Outdoor recreation spending and production are allocated to states by applying state-level data to detailed, underlying national values. The underlying estimates are distributed to states before aggregation to publication levels to provide the most accurate state values possible. Statistics are primarily based on time-series data generated from the Economic Census and Quarterly Census of Employment and Wages (QCEW). Additional government and non-government data sources are used to supplement the census data and to refine and evaluate the statistics.
