Personal Income by State, 1st Quarter 2021

State personal income increased 59.7 percent at an annual rate in the first quarter of 2021 after decreasing 3.9 percent in the fourth quarter of 2020, according to estimates released today by the Bureau of Economic Analysis (table 1). In the first quarter of 2021, the increase in transfer receipts was the leading contributor to personal income growth in all states and the District of Columbia (table 2). The percent change in personal income ranged from 89.3 percent in Mississippi to 31.1 percent in the District of Columbia.

Transfer receipts increased \$2.3 trillion for the nation in the first quarter of 2021, accounting for almost all the growth in personal income (chart 1). The increase in transfer receipts reflected new government pandemic relief payments provided by the Coronavirus Response and Relief Supplemental Appropriations (CRRSA) Act and the American Rescue Plan Act.

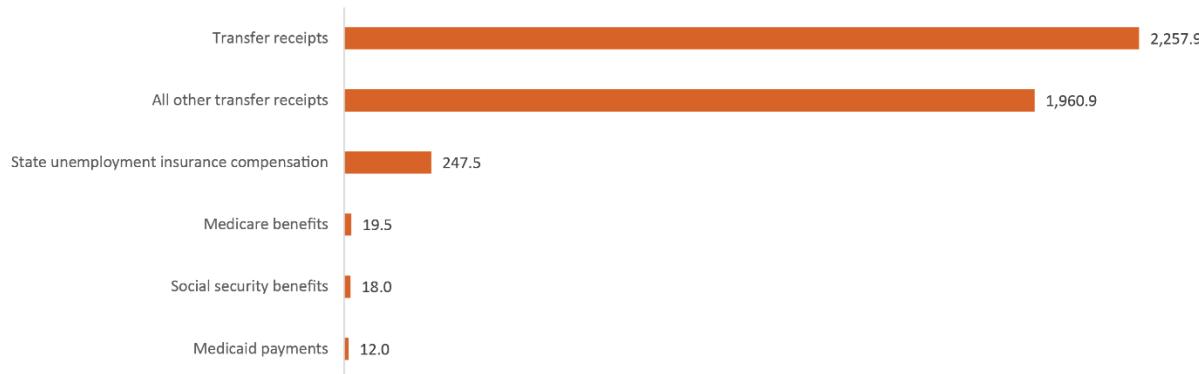

U.S. Bureau of Economic Analysis

Coronavirus (COVID-19) Impact on First-Quarter 2021 State Personal Income Estimates

The 2021 first-quarter estimates of state personal income continue to be impacted by the response to the spread of COVID-19. In the first quarter, government assistance payments, such as direct economic impact payments, expanded unemployment benefits, and Paycheck Protection Program loans, were distributed to households and businesses through the Coronavirus Response and Relief Supplemental Appropriations Act and the American Rescue Plan Act. The full economic effects of the COVID-19 pandemic cannot be quantified in the state personal income estimates, because the impacts are generally embedded in source data and cannot be separately identified.

Transfer receipts. The increase in transfer receipts primarily reflected increases in state unemployment insurance compensation and in all other transfer receipts (chart 2). State unemployment insurance compensation was boosted by a temporary \$300 increase in weekly benefits provided by the American Rescue Plan Act. The increase in all other transfer receipts reflected the \$600 economic impact payments to individuals provided by the CRRSA Act and the \$1,400 economic impact payments provided by the American Rescue Plan Act. Transfer receipts increased in every state and the District of Columbia, ranging from \$251.9 billion in California to \$3.8 billion in the District of Columbia (table 2).

United States, 2020:Q4–2021:Q1
(Billions of dollars)

U.S. Bureau of Economic Analysis

Earnings. For the nation, earnings increased 6.1 percent in the first quarter of 2021 after increasing 11.5 percent in the fourth quarter (table 2). The increase in earnings reflected the continued economic recovery following the partial economic shutdown that began in the first quarter of 2020 after the start of the COVID-19 pandemic.

Earnings increased in 20 of the 24 industries for which BEA prepares quarterly estimates (table 4). Finance and insurance; professional, scientific, and technical services; and durable manufacturing were the leading contributors to the overall growth in earnings. The percent change in earnings across all states ranged from 11.1 percent in Texas to –10.2 percent in South Dakota.

Earnings in Michigan and eight other states including Illinois, Indiana, Kansas, Kentucky, Missouri, Ohio, Tennessee, and Texas increased in part due to profit sharing payments by auto manufacturers to workers represented by the United Auto Workers union.

Decreases in earnings in South Dakota and five other states including Iowa, Montana, Nebraska, North Dakota, and Wyoming were primarily the result of decreases in farm earnings due to lower payments to farmers from the Coronavirus Food Assistance Program.

Property income. Property income (dividends, interest, and rent) decreased 0.1 percent for the nation in the first quarter of 2021 after increasing 5.8 percent in the fourth quarter. The percent change in property income across all states ranged from 1.4 percent in South Dakota to –1.7 percent in Georgia.

Updates to Personal Income

Today, BEA also released revised quarterly estimates for the first quarter of 2020 through the fourth quarter of 2020. Updates were made to incorporate source data that are more complete and more detailed than previously available and to align the states with revised national estimates that were released on May 28, 2021.

Revised annual state personal income estimates for 1998 to 2020 will be released on September 23, 2021. In addition, revised estimates for the first quarter of 1998 through the first quarter of 2021 and preliminary estimates for the second quarter of 2021 will also be released. The November 2021 *Survey of Current Business* will contain an article that describes the results.

BEA state per capita personal income statistics are calculated using Census Bureau midyear population estimates. These annual midyear estimates are based on the 2010 census. BEA will incorporate Census Bureau midyear population estimates based on the 2020 census results when they become available.

Next release: September 23, 2021, at 8:30 A.M. EDT
Personal Income by State, 2nd Quarter 2021 and Year 2020

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Per capita personal income is calculated as the total personal income of the residents of a state divided by the population of the state. In computing per capita personal income, BEA uses midquarter population estimates based on unpublished Census Bureau data.

Earnings by place of work is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income. BEA's industry estimates are presented on an earnings by place-of-work basis.

Net earnings by place of residence is earnings by place of work less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis. BEA presents net earnings on an all-industry level.

Property income is rental income of persons, personal dividend income, and personal interest income.

Personal current transfer receipts are benefits received by persons from federal, state, and local governments and from businesses for which no current services are performed. They include retirement and disability insurance benefits (mainly social security), medical benefits (mainly Medicare and Medicaid), income maintenance benefits, unemployment insurance compensation, veterans' benefits, and federal education and training assistance.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

The estimate of personal income for the United States is the sum of the state estimates and the estimate for the District of Columbia; it differs slightly from the estimate of personal income in the National Income and Product Accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Statistical conventions

Quarter-to-quarter percent changes are calculated from unrounded data and are annualized. Annualized growth rates show the rate of change that would have occurred had the pattern been repeated over four quarters (1 year). Annualized rates of change can be calculated as follows: $((\text{level of later quarter} / \text{level of earlier quarter})^4 - 1) * 100$. Quarterly estimates are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between published estimates.

BEA regions

BEA groups all 50 states and the District of Columbia into 8 distinct regions for purposes of presentation and analysis as follows:

New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

Mideast (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania)

Great Lakes (Illinois, Indiana, Michigan, Ohio, and Wisconsin)

Plains (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota)

Southeast (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia)

Southwest (Arizona, New Mexico, Oklahoma, and Texas)

Rocky Mountain (Colorado, Idaho, Montana, Utah, and Wyoming)

Far West (Alaska, California, Hawaii, Nevada, Oregon, and Washington)

Uses of state personal income statistics

State personal income statistics provide a framework for analyzing current economic conditions in each state and can serve as a basis for decisionmaking. For example:

- Federal government agencies use the statistics as a basis for allocating funds and determining matching grants to states. The statistics are also used in forecasting models to project energy and water use.
- State governments use the statistics to project tax revenues and the need for public services.
- Academic regional economists use the statistics for applied research.
- Businesses, trade associations, and labor organizations use the statistics for market research.

1. Percent changes are expressed at annual rates.

2. Net earnings is earnings by place of work—the sum of wages and salaries, supplements to wages and salaries, and proprietors'

income—less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

Note. Estimates may not add to totals because of rounding.
