**GROSS STATE PRODUCT: NEW ESTIMATES FOR 1997 and
REVISED ESTIMATES FOR 1995-96**

In 1997, real gross state product (GSP) -- the value added in production by the labor and property located in a state -- increased in all states except Hawaii, according to estimates released by the Commerce Department's Bureau of Economic Analysis. In Hawaii, the decline partly reflected weakness in the construction and real estate industries.

In 1997, real GSP in the nation grew 4.3 percent to \$7.3 trillion. By state, growth rates in real GSP ranged from an increase of 7.6 percent in Oregon to a decline of 0.2 percent in Hawaii (see table 1).

Fastest growing states

In 1997, the five states with the fastest growth in real GSP were Oregon (7.6 percent), New Hampshire (7.5 percent), Texas (6.8 percent), Arizona (6.7 percent), and Colorado (6.5 percent).

In Oregon, the major contributor to the growth in real GSP was manufacturing (see table 2). In New Hampshire, the major contributors were manufacturing and finance, insurance, and real estate. In Texas, the major contributors were manufacturing and services. In Arizona, the major contributors were manufacturing and services. In Colorado, the major contributor was services.

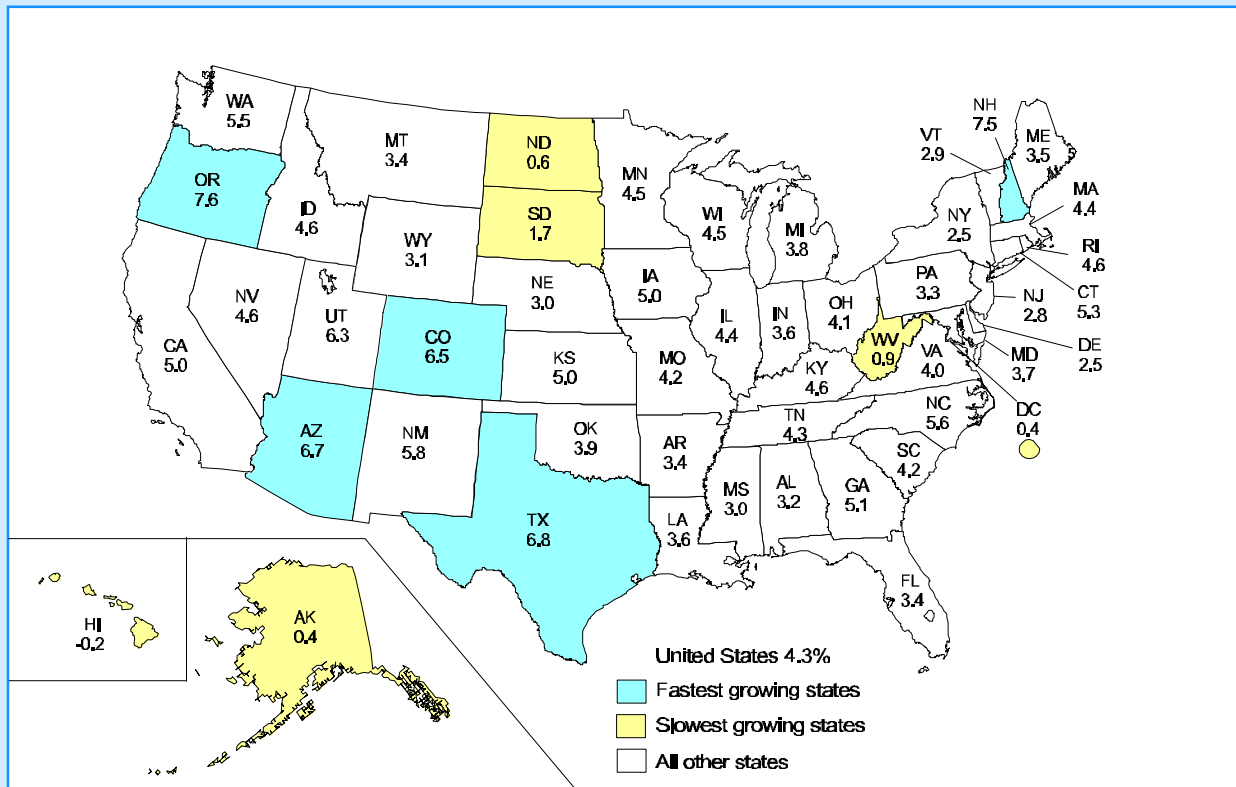

- more -

Slowest growing states

In 1997, the five states with the slowest growth in real GSP were Hawaii (-0.2 percent), Alaska (0.4 percent), North Dakota (0.6 percent), West Virginia (0.9 percent), and South Dakota (1.7 percent).

In Hawaii, the decline in real GSP mainly reflected declines in construction and in finance, insurance, and real estate. In Alaska, the slow growth in real GSP mainly reflected declines in government and mining. In North Dakota, the slow growth mainly reflected a decline in agriculture, forestry, and fishing. In West Virginia, the slow growth mainly reflected a decline in manufacturing. In South Dakota, the slow growth reflected a decline in finance, insurance, and real estate.

Real Gross State Product: Percent Change, 1996-97

U.S. Department of Commerce, Bureau of Economic Analysis

State shares of U.S. current-dollar GSP in 1997

In 1997, current-dollar GSP for the nation was \$8.1 trillion. California's current-dollar GSP, which exceeded \$1.0 trillion for the first time, accounted for the largest share (12.7 percent) in the nation (see table 3). Four other states with large shares of the U.S. total GSP were New York (8.0 percent), Texas (7.4 percent), Illinois (4.9 percent), and Florida (4.7 percent). Together, these four states and California accounted for nearly 40 percent of the nation's total GSP in 1997. The five states with the smallest shares of the U.S. total GSP were Montana (0.2 percent), North Dakota (0.2 percent), South Dakota (0.2 percent), Vermont (0.2 percent), and Wyoming (0.2 percent).

Revisions to the 1995-96 estimates

The GSP estimates for the nation and states have been revised for 1995-96 to incorporate the revisions to the national estimates of gross product originating (GPO) by industry, the revisions to the state source data, and the newly available 1996 Census Bureau's annual survey of manufactures. In general, the revisions to GSP as a percentage of the previously published estimates are small. For the nation, current-dollar GSP was revised up \$3.5 billion in 1995, and revised down \$1.5 billion in 1996. In 1996, the five states with the largest upward percentage revisions were Oregon (4.5 percent), Delaware (3.1 percent), New Hampshire (2.9 percent), Hawaii (1.9 percent), and Utah (1.7 percent); the five states with the largest downward percentage revisions were South Dakota (-3.9 percent), Louisiana (-2.9 percent), Pennsylvania (-1.7 percent), Michigan (-1.6 percent), and Tennessee (-1.4 percent). For detailed discussions on major sources of the revisions and on impacts of the revisions, see "Gross State Product by Industry, 1995-97" in the forthcoming June 1999 Survey of Current Business.

Definitions

GSP is the value added in production by the labor and property located in a state. GSP for a state is derived as the sum of the GSP originating in all industries in the state.

The estimates of real GSP are derived by applying national implicit price deflators by detailed industry to the current-dollar GSP estimates by detailed industry. Then, in order to capture the differences across states that reflect the relative differences in the mix of goods and services that the states produce, the same chain-type index formula used in the national accounts is used to calculate the estimates of total real GSP and real GSP by major industry. For additional information, see "BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth," Survey of Current Business 77 (May 1997): 58-68; and "Comprehensive Revision of Gross State Product by Industry, 1977-94," Survey of Current Business 77 (June 1997): 28-29.

GSP for the nation differs from GDP for the following reasons: GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy; GSP excludes and GDP includes the compensation of federal civilian and military personnel stationed abroad and government consumption of fixed capital for military equipment, except domestically-located office equipment, and for military structures located abroad; and GSP and GDP have different revision schedules. In 1997, real GDP increased 3.9 percent, and real gross domestic income increased 4.2 percent.

Availability of detailed estimates of GSP

The GSP estimates for 63 industries for 1977-97 for states, BEA regions, and the United States are available from BEA on its *Gross Product by Industry for the United States and States* CD-ROM (product number MCN-0231, price \$35.00): Current-dollar estimates of GSP and its three components -- compensation of employees, indirect business tax and nontax liability, and property-type income -- and real GSP estimates in chain-type quantity indexes for 1977-97 and in chained (1992) dollars for 1982-97. The CD-ROM includes a data-retrieval program that allows users to view or print selected records from the database and selected analytical tables and charts. Users may also export selected data to a file for importation into computer spreadsheets.

To order using VISA or MasterCard, contact the BEA Order Desk at 1-800-704-0415 (outside the United States, call 202-606-9666). To order by mail, send a check made payable to "Bureau of Economic Analysis, BE-53" to BEA Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.

For further information, e-mail <gspread@bea.doc.gov>, or call 202-606-5340.

* * *

BEA's major national, regional, international, and industry estimates; the Survey of Current Business; and BEA news releases are available on BEA's web site:

<http://www.bea.doc.gov>

STAT-USA maintains an electronic bulletin board (EBB) and an Internet site, which contain BEA estimates, BEA news releases, and the Survey of Current Business. To subscribe to STAT-USA's World Wide Web system, go to: <http://www.stat-usa.gov>. Subscriptions for single-user unlimited access to STAT-USA's Internet information are \$50.00 for 3 months or \$150.00 for 1 year. For further information, call 202-482-1986.

Summary BEA estimates are available on recorded messages at the time of public release at the following telephone numbers:

(202) 606-5306 Gross domestic product
606-5303 Personal income and outlays
606-5362 Summary of international transactions

Most of BEA's estimates and analyses appear in the Survey of Current Business, BEA's monthly journal. The printed Survey of Current Business is available from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. First class mail: Annual subscription \$104.00 domestic. Second class mail: Annual subscription \$42.00 domestic, \$52.50 foreign; single issue \$15.00 domestic, \$18.75 foreign.

Note: Chained (1992) dollar series are calculated (using national chain-type implicit price deflators) as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually

not additive; that is, state totals usually do not add to regional totals or to U.S. totals, and regional totals usually do not add to U.S. totals.
